

This mod adds only the currency symbol to the game. No changes to the prices or gameplay have been made. Only changes are made in the language files and is available only for german and english languages.

Content

The 2.0 version contains 22 real life currencies, 1 fictional currency and empty files for you to make your own (see instructions at the end of the readme). Here is an overview of the included currencies and the type available – Letter code (f.e. USD) and symbol (f.e. \$). The reason for some currency symbols not being included is that Cities in Motion standard fonts do not support those symbols (for example the euro sign - € is replaced with □)

Currency	Letter code	Symbol
Bosnian Convertible Marka	BAM	KM
Bulgarian Lev	BGN	-
Belorussian Ruble	BYR	p.
Swiss Franc	CHF	-
Chinese Yan	CNY	¥
Czech Koruna	CZK	-
Danish Krone	DKK	kr
British Pound	GBP	-
Croatian Kuna	HRK	kn
Hungarian Forint	HUF	Ft
Iceland Krona	ISK	kr
Japanese Yen	JPY	¥
Lithuanian Litas	LTL	Lt
Latvian Lats	LVL	Ls
Macedonian Denar	MKD	-
Norwegian Krone	NOK	kr
Polish Zloty	PLN	-
Russian Ruble	RUB	-
Swedish Krona	SEK	kr
Ukrainian Grivna	UAH	-
Euro	EUR	-
United States Dollar	USD	\$
Credits (Fictional currency)	CRE	¢

Installation

1. Choose your currency.
2. Choose the type (Letters or Symbol)
3. Find the files in the RAR file
Examples – Latvian Lats symbol files are in Symbol/LVL
Lithuanian Litas letter files are in Letters/LTL
4. Copy the files to [Game directory]/metro/strings
5. Overwrite everything

Compatibility with other mods

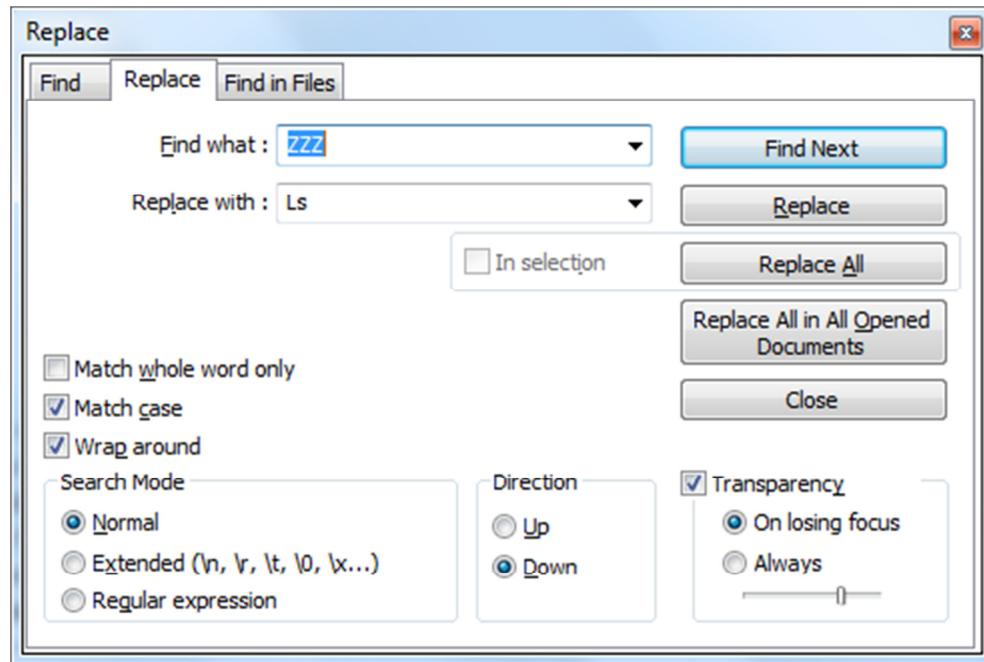

The only files used in my mod are de.strings and en_US.strings if you have installed a mod where the files are modified (for example where bus names are changed) the changes will be lost and the standards will be restored.

Exclusion is the *CIM-CAM and more mod* by XiDragon. The version up to 1.31 is supported.

Create your own currency

1. Extract the folder named Empty from the RAR to a directory of your choice.
2. Open the language file you are using (german – *de.string*, english – *en_US.string*) with Notepad or similar programm.
3. Open the replace function (*Edit>>Replace* or *CTRL+H*).
4. In the *Find what* field write **ZZZ** (three times capital letter Z).
5. In the *Replace with* field write **your currency code or symbol**.

It should look like this (I'm using Notepad ++, for other programmes the window could look different but the fields should be the same).

6. Press *Replace All*.
7. Save.
8. Follow the above mentioned installation instructions.
